

Take the Guesswork Out of End-user Data Backup & Protection for a Distributed Workforce

A single cloud-based platform that seamlessly integrates into your end-user environment and provides endpoint data backup, lightning fast recovery, management and protection.

A powerful endpoint data backup and protection tool that gives IT complete control.

Discovery & Inventory

Reporting on your entire endpoint network with a detailed Hardware & Software Inventory.

Migration

Remotely migrate user data & profile settings to a new machine or OS in minutes.

Automated Backup

High-performance, near CDP backups on-prem, according to your centrally set policies.

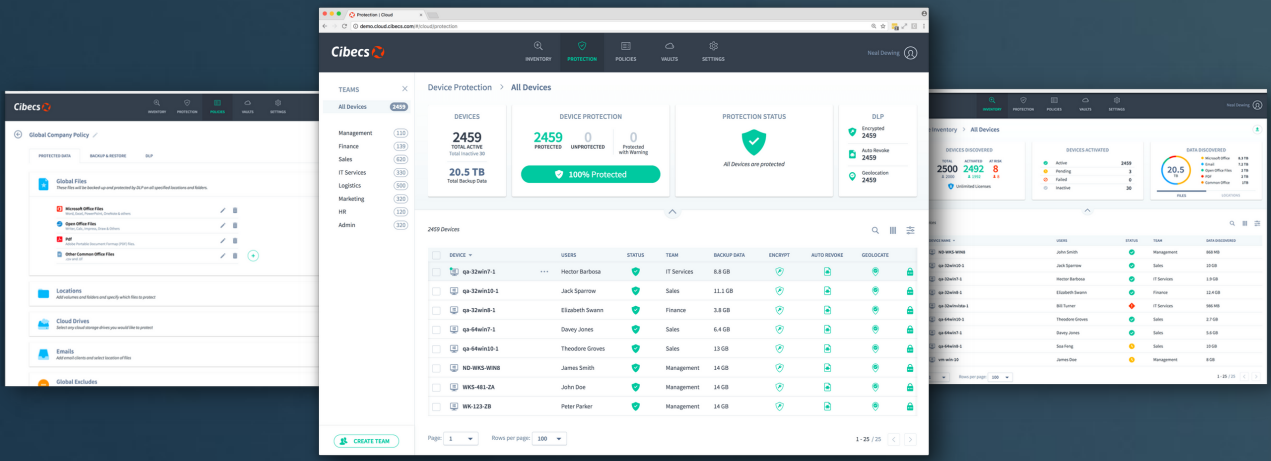

Compliance

Ensure Governance & Compliance to global Information Security standards such as GDPR, PoPI, HIPPA and ISO 27001., etc.

Data Loss Prevention (DLP)

Multi-layered Data Protection with encryption, remote wipe, remote revoke & geo-locate.

Reasons to prioritize the end-user backup and protection:

-  Sensitive business data on user's endpoint computers is most often left unprotected.
-  Data Migration projects can be managed remotely, and become quick & easy, creating significant overhead savings.
-  GDPR Law & Corporate Governance Compliance regulations have increased penalties and reputational damages can result from data loss & data mismanagement.
-  Businesses need an effective strategy to seamlessly & securely move their data to the cloud.
